

The Process of Photosynthesis

Kai Burton, Fodie Camara, Colin Pierce, and Jaiye Omowamide

What is Photosynthesis?

Process in which plants and other animals build sugars from carbon dioxide and water.

Makers or Takers

Autotrophs: Makers

Heterotrophs: Takers

What is the equation of Photosynthesis?

The equation of photosynthesis is

Water and carbon dioxide is converted into sugar and oxygen using sunlight as the primary source.

What are the organelle of Photosynthesis?

- Chloroplast
- Mitochondria

What are the kingdoms/species that use Photosynthesis?

- Plants

- Bacteria

- Protists

What is the cycle of Photosynthesis?

- Stage 1
(Light Cycle)
- Stage 2
(Calvin Cycle;
Electric transport chain)

**That's It.
Thanks!**
