Dear Reader,

Hello reader I am here to introduce myself to you all hi I am Tavi Grazier. I attend the Science Leadership Academy. This is my first year I am here to inform you about my background. I am a Philadelphia native born and raised. I was born in a rough part of Philadelphia but that never once slowed me down or held me back at all ive been through what feels like it all there has been times were i wondered what I would eat. But those days are long behind me. I grew up in an environment where there were alot of drugs, gun shots, etc . I attended James G Blaine elementary school where I had met a teacher . That has made a long lasting impact on my life her name was Ms. Browser although I was a smart student I read at a way higher reading level then most I still had my ups and downs but she helped me get through it she always believed in me. Later on in life I moved into a better neighborhood then after comparing I told myself I will never be in a spot like that again and I am going to be successful.

Sincerely,
Tavi Grazier

What makes you different from everyone else what makes you stand out from the crowd? Well I think the thing that separates me from the crowd is my motivation for my passion. My passion is epidemiology you may wonder why but I am here to explain one of the reasons why this is my passion is because. It seems like a job that is just meant for me and I am aware it's early in my life but I can honestly say I don't think there is any other job I want but this one. It was hard picking out one thing and sticking to it. Oftentimes people say they want to do one job then they name another job. Which is fine and great that you want to find yourself. But I figured if I pick my path early the hard part will be slowly moving out the way I want to do this job to help people save lives even if my research goes unnoticed. My goal from this job is not to become a famous researcher but my goal is to go to bed knowing I helped someone people all over need a hero and someone has to step up and do the job. Furthermore I'd like to acknowledge what epidemiologists do in their field of study epidemiologists study people's health here is an example. When COVID-19 was still heavy we had epidemiologists to find what the cause for it was and how we are able to slow this rapid rate down. When I've tried to inform people of what I wanted to be they are confused asking what is an epidemiologist that does say that this occupation is heard. But to an extent it's nice to put the word out and inform people of our heroes without capes. They save lives just like in comics. We have heroes like cops, firefighters, paramedics, etc. I could go on and on about your unnamed heroes. They leave lasting impacts on countless lives and if I'm able to save lives and get paid I will gladly do this for the rest of my life. To others this may sound boring and they may ask would you not want to be a rapper, stuntman, etc and my answer to that is those jobs don't suit me I don't want to entrain I want to make changes in people's lives. It would be nice to be one of the people in my family to have a degree. That something that would make my life complete. It's a life goal of mine I want to be one of the most successful people in my family then one of the best researchers then in the world I'm planning to climb up high and higher in the world like Jeff Bezos, Elon Musk, Bernard Arnault & family. These are people I inspire to be like they have made it really far in life and I plan to surpass them in every way.

Extra: I am not the best artist but
I hope you enjoy the stick man
