## Editor's Letter

Dear Readers,

I am the type of person that you'll never know what to expect from me. I'm different, creative, and loving, but also hyper. In this magazine you will learn the true me. In the makes of writing this magazine, I learned that we as humans don't live to impress other people. In my articles you will learn the true me. There are three different topics in this magazine that I feel really describe me. There are true stories, and much other fun interesting things too. It seems to me that this generation that I am apart of is, some how changing. Everyone wants to be like everyone else, or follow someone else. Whatever happens to being you? Basically, my magazine just shows and tells you how I am different from everyone else in the world, which makes me who I am.

# TEN TOP FAVORITE SONGS! FROM RED STREAM!

1. Kanye West- Power Mix
2. Nicki Minaj- Bottoms Ups

## Energy

CALM DOWN! Danielle you are always so hyper you're like a puppy, play, play, play! My friends are always telling me to calm down. My energy is priceless; there is so much of it. At 4 am, I can be the most hyper person you know! Energy is written everywhere. EVERYWHERE ON THIS EARTH! On billboard, bottles of drinks, candy bars, snacks, gym ads, basically everywhere. There are different types of energy, but you never ever heard of Danielle's energy. It's never advertised, bottled, or even sold. It's my own special energy that no one can replace. My energy has numerous words that describe it. Wild, creative, cheerful, outgoing, wonderful, peaceful, crazy, and simply weird. All those words describe MY energy, not yours, Jimmy's, or even Bob's. If I get a phone call at 2am from someone and that person is upset and depress. I would offer them my "depression" pants. My depression pants are these green ugly pants that I stole from my mother. They are so small for my mom, but to big for me. Basically, I wear these pants when I'm overwhelmed or it's a depressed time or even when I feel like I'm going to become sad. The reasons why I have depression pants are because of my creative mind. I'm the person in the class who make boring day, into fun days

FOOD=Fuel. Just like a car needs fuel, I need food. Food needs me. Me + food=ENERGY! As you can see in my writing, I have a problem with energy. Its wonderful, my wonderful energy.

ENERGY

## Technology

Close your eyes... imagine a life, without TECHNOLOGY! How do you feel? What's happening? Why is most of our world disappearing? Our lives are gone! Done. Boring. What is there left to do on this earth? To us nothing, but truthfully there is so much.

As a teenager it is hard for me to imagine my life without my cell phone, laptop, TV, ipod, radio, fans, A/C, buses, trains, trolleys. Sadly most of our favorite foods are made with the use of technology. What if the world power system just completely goes out! There is no possible way to restore the power? What would we do? Most of our technology only works with the use of electricity. For example. A cell phone needs a charger to keep it working. Everyone knows teenagers NEED, technology to survive. One way or another we do need it. Our parents grew up with out a cell phone, laptop, game system, etc. We can barley breath without it.

Really think about our Earth without technology, or even electricity. Would it be the same, feel the same, smell the same, and look the same? Would we have a global warning problem like we do now? Would life be more peaceful? Would we be like cavemen? Or would we as smart human beings just learn to make our way through things, and build a brand new world? You never know when it comes to humans, were not perfect nor the smartest thing in the world, but we do have a brain that can do a lot of things. Really, the big question is, what would do with technology?

Technology to be is very important to me. I lived my whole life with it, and so did many other people. I use technology everyday. I never lived without it. I always wondered what life would be like without something, such as technology! I never really knew how grateful I was until I wrote this article. Really what would life be without all of things we use in our everyday life? It's a question to think about.
